EXPERIENCE / INTERNSHIPS

Associate Software Engineer, MPHASIS Limited 02/2025 – 06/2025
Pune, India

- Developed and optimized REST APIs in ASP.NET Core and built Angular components for client facing financial applications in a live production environment.
- Collaborated with client teams in an Agile model, ensuring production grade code quality through unit testing, logging, and monitoring.

Software Engineer Intern, Honeywell Limited 05/2024 – 08/2024
Hyderabad, India

- Developed Python scripts for IoT data ingestion, cleaning logs and forwarding telemetry to cloud storage.
- Built React dashboards to visualize real-time sensor data and alerts for system monitoring.

EDUCATION

MSc - Data Science, University of Glasgow 2025 – 2026
Glasgow, Scotland

- Grade: First Class (Expected)

BTech - Computer Science and Engineering, Jawaharlal Nehru Technological University 2021 – 2025
Hyderabad, India

- Grade: First Class with Distinction

TECHNICAL SKILLS

Programming Languages

Python, Java, C#, C++, JavaScript, TypeScript

Frameworks & Platforms

Angular, ASP.NET Core, Flask, Django, Next.js

Libraries

Pandas, Matplotlib, Scikit-Learn, TensorFlow, Pytorch

Databases

MySQL, Microsoft SQL, PostgreSQL, MongoDB

Tools

Git, Docker, Azure blob, Swagger, Apache Spark, Kafka

Concepts

OOP, Data Structures, REST APIs, SDLC, Unit Testing

PROJECTS

Aegis - AI Powered Security Code Reviewer 📄, Next.js, Claude API, Voyage AI, Supabase, pgvector, GitHub Webhooks

- Automated PR reviews & RAG pipeline: Built an end to end system triggered by GitHub webhooks that runs RAG based analysis using Voyage AI embeddings and Supabase pgvector across OWASP/CVE patterns
- Production deployment: Shipped a full stack Next.js app on Vercel with GitHub OAuth, per repo webhook registration, and a review history dashboard.

DeepFake Detection on Videos using Inception V3 📄, Python, InceptionV3, Flask, JavaScript, DFDC Dataset

- Trained an InceptionV3 model on the DFDC dataset achieving 87% accuracy, deployed via Flask for backend inference.
- Preprocessed and augmented the DFDC dataset using face extraction and frame sampling to reduce overfitting.

Real Time Fraud Detection System 📄, Python, Kafka, Scikit-Learn, PostgreSQL, Docker

- Designed an event driven Kafka pipeline to ingest high throughput transaction streams in real time, with an anomaly detection model trained on SMOTE rebalanced data for strong precision-recall on fraud classification.
- Containerised the full system with Docker, persisting flagged transactions to PostgreSQL with a monitoring interface for fraud alerts and model decisions.

LEADERSHIP & ACHIEVEMENTS

- **President, IEEE Society** – Led technical events, managed web presence, and drove engagement across 100+ students.
- **Hackathon Winner** – Secured **1st place** in a university-wide team hackathon project.
